

Frequently Asked Questions

Will these math classes transfer to other schools?

These three courses will transfer to any university within Kansas. If you are planning to transfer out of state, be sure to check the transfer guidelines of the university you are interested in.

What if I can't enroll in the math course because my placement score is too low?

There is a lab course available that you take alongside the 3-hour course. This lab provides extra support to help you understand the material better, improve your study skills and learn effective note-taking strategies.

Which math course should I take?

The right math course depends on the degree you are working toward. You can find more information and details on our website to help you choose the best course.

What if I haven't decided on a major yet?

If you are unsure about your major, taking Quantitative Reasoning class is a great option. It covers a variety of math topics that are useful in everyday life

Why are there now three math courses available to fulfill the math requirement?

The three math courses provide students with the best option that fits their degree program. Research shows that the traditional college algebra model may not be the most effective for some degrees, so offering different courses is designed to improve student success and help more students complete their degrees.

What if I change my major?

You may need to take a different math course to meet the new degree requirements. However, if the new major requires the same math course, then no additional math courses will be needed. It's always a good idea to check with an academic advisor to make sure you are on the right track with your new degree requirements.
